

# TrackPro - Contour II

## 1/32 - 1/24 Slot Car Track Cleaning System

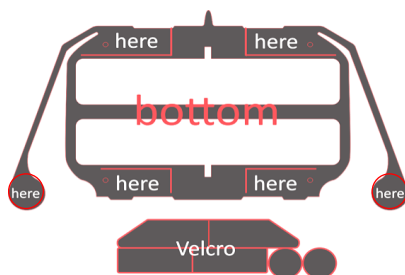

↓ see Quick Start below ↓

## Quick Start

See back for compatibility, tips and special instructions if using Scalextric Sport track.

### 1) Apply Velcro

Affix the pre-cut Velcro® pieces to the bottom of the cleaner using the etched lines as guides. Assembly is now complete.

### 2) Attach the Cloth

Place a pre-cut Swiffer® cloth centered on a track lane, then place the cleaner on top. Next, lightly press down on the cleaner and its side wings to ensure the cloth is well attached and the cleaner is fully slotted.

### 3) Clean Your Track

Place a slot car behind the cleaner then drive the slot car, pushing the cleaner around the track. After a few laps, check the cloth, flipping it over to the clean side or replacing it until your track is clean.

**Performance:** TrackPro Contour II will effectively clean dust and debris from your track surface, rails and slot. In addition, the slot car used to push the cleaner around will benefit from some degree of tire conditioning of the driven tires. You'll experience improved performance of your slot cars and track!

**Compatibility:** TrackPro - Contour II works on smooth to moderately textured 1/32 and 1/24 scale track such as Carrera®, Scalextric® Sport, Strombecker®, wood tracks and more. It will not work on SCX®, Ningo® or traditional Scalextric® track due to their abrasive surface. Most slot cars are able to push the cleaner around however some vintage slot cars such as Strombecker® or Eldon® cannot, due to a lack of traction or power. Digital lane changing is not supported, requiring the cleaner to be placed on each of the track lanes manually.

**Scalextric Sport Track:** If you find that directly attached barriers interfere with the cleaner, remove the two circular Velcro pads. If you find that your slot cars struggle to push the cleaner, cut a slot in the cloth for the slot guide to go through. Slot cleaning will still occur from air turbulence that causes dust and debris from the slot to collect around the middle area of the cloth.

## Tips

1. Cut your own Swiffer cloths using the cloth cutting template by tracing an outline, then use scissors to cut new cloths. Swiffer Sweeper X-Large Sweeping Cloth Refills (Unscented) can be purchased from Amazon to make up to 256 cloths.
2. To significantly enhance cleaning of the driven tires and track, lightly mist or dampen the Swiffer cloth with something track-safe. You may need to help the slot car along until some of the moisture is drawn from the cloth so that traction is regained.
3. Use both sides of the pre-cut Swiffer cloths. You may be able to rinse and re-use your cloths multiple times.
4. Switch to different slot cars to push the cleaner around to help condition their driven tires for better traction. Driving a bit aggressively can help remove dry rubber and dust from the driven tires.
5. There is a pin at the front of the cleaning module that can be used to pierce the Swiffer cloth to help hold it. Its use is optional and normally not required.
6. Periodically inspect the Velcro pieces. Adjust them if they have moved and remove cloth fibers to maximize their ability to hold Swiffer cloth. A spare set of Velcro hook material has been provided in case you need to replace them.

**TrackPro - Contour** slot car track cleaning system is manufactured in Canada by HiTech Safety Displays Ltd. We hope you are thrilled with your new track cleaning system. For customer service or to provide feedback, please contact us at:
